SAMUEL L. SHMIDMAN

Waltham, MA & New York, NY | SamuelShmidman@gmail.com | 917-756-6955 | linkedin.com/in/samuel-shmidman | portfolio.shimiditech.com

PROFILE

Software/A.I. engineer and builder completing an M.S. in Computer Science, focused on AI systems, full-stack products, infrastructure, and hardware. Built and deployed production AI applications, designed custom PCBs, and engineered hardware for a Formula One team.

EDUCATION

Brandeis University — M.S. in Computer Science Expected May 2027

Brandeis University — B.S. in Computer Science, Cum Laude August 2026

SELECT PROJECTS

- Emmaily. Built an AI email assistant that searches connected inboxes and answers questions with links to the original emails. Supports local and hosted models (Python, FastAPI, React, Docker).
- Gridfinity Tracer. Built a Python/OpenCV app that turns photos of tools into fitted 3D-printable storage bins, with CAD export (FastAPI, React, Docker).
- EZ-TES. Built a time-tracking app for Williams Racing and published it on the iOS App Store, with project codes, timesheets, and CSV import/export (React Native, Expo, SQLite).

EXPERIENCE

YC-Backed Healthcare AI Startup — Software Engineer Intern Aug 2026 – Present

- Building the product from the ground up alongside the founders, using AI to develop software for a healthcare startup.

AI Software Consulting — Software Engineer & Consultant Summer 2026 – Present

- Designed, built, and deployed Emmaily, a production AI email assistant for an industrial supplier, with mailbox syncing, encrypted storage, and access controls for multiple organizations.

Securitas Ex Machina Lab, Brandeis University — Research Assistant May 2026 – Present

- Researching browser-device fingerprinting techniques using WebGPU rendering, GPU precision, and timing characteristics.

Brandeis Computer Science Department — Teaching Assistant Aug 2025 – Present

- Currently TA for Embedded Systems Development. Previously TA for Fundamentals of Computer Systems.

Brandeis Engineering & Design Innovation — Classroom Technician / Student Worker Oct 2023 – Present

- Maintain a 40+ printer 3D-print farm and support student design and fabrication projects. Built a print tracking system used for over two years.

Atlassian Williams Racing Formula One Team — Off-Car Engineering Intern Summer 2025

- Designed FIA testing components, garage/pit equipment, and manufacturing tooling in Siemens NX. Released production-ready designs to manufacturing.

The Bonnot Company — Engineering Intern Summer 2024

- Worked on the factory floor assembling and testing single-screw industrial extruders.

Toys“R”Us — Summer Employee Summer 2023

- Worked on the floor in the Flagship store at American Dream

TECHNICAL SKILLS & HOMELAB

- Homelab. Run Linux servers for self-hosted services, Home Assistant, and local AI models, using Proxmox, Docker, Tailscale, and a three-node Raspberry Pi Kubernetes cluster.
- Languages. Python, Java, JavaScript, Rust, C, SQL, and HTML/CSS.
- Additional tools. Siemens NX, Autodesk Fusion, Onshape, SolidWorks, and KiCad. | Interests. product design, watches, F1 racing, flying planes
